Illustration of scalable architecture for SAS interface, with dual controller, NVR and storage units

- The WatchNET NVR storage unit is an integral component of the Enterprise video management solution. It can be scaled from a single camera to thousands of cameras. High performance and reliability of the storage unit makes it an ideal solution in installations of today's demanding redundancy and storage solution.
- WatchNET provides High end processors and a RAID enclosure in one easy hot swappable pull-out chassis, resulting in both space and cost savings. RAID 0, 1, 5, 6, 10, 50, 60 and JBOD, support is available through a hardware-based RAID controller that removes the loading on the processor.
- A convenient web browser interface is used to manage the RAID controller and configuration of the NVR, without any software required to be installed on client computer.
- Dual controller configuration has the primary system in operation with the other controller providing backup for redundant data storage. If the primary system detects an issue, the back-up system is activated immediately, allowing the NVR to record in a continuous manner. The switch-over to the secondary system is automatic with self-adaptive 10M/100M/1000M network interfaces.
- With functionalities such as load balancing and network fault tolerance, the IPVR-24DR is capable of handling large video bandwidth to provide smooth recording and playback.
- WatchNET professional VMS can manage live and recorded video and also display multiple screens and virtual matrix.

Scalable architecture with multiple options for video storage expansion

- WatchNET IPVS-series Video Storage provides maximum scalability to meet enterprise level requirements for video surveillance storage. Supports 48 hot-swappable SATA 6TB HDDs in a 19U standard rack-mount.
 - Users can expand to unlimited units of storage as required.
 - Provides high performance fault-tolerant data protection mechanisms and protection of clients' data security, supporting various data protection modes such as RAID 0, 1, 5, 6, 10, 50, 60 and JBOD.
 - WEB based system configuration is used for easy setup, no additional software required to be installed.
- WatchNET NVR Recording resilience is enhanced further, with features:
- Redundant Power supplies and fans
 - Dual controller
 - Hot Standby
 - Multiple RAID configurations
 - MSAS and iSCSI interface

Enterprise Class Management Software

WatchNET Access software is a powerful, network-based enterprise-level security management software that accommodates widely-dispersed applications with an unlimited number of users, controls thousands of doors, and allows you to simultaneously access the system.

The enhanced user experience makes navigation and operation easy and intuitive. WatchNET Access Software platform offers the ultimate balance between power and affordability in a network environment. It offers the flexibility to securely connect controllers directly on the network, as well as over RS-485.

WatchNET Access software is a fully integrated solution for Access Control, Intrusion Detection, CCTV, Time & Attendance, and Building Management. This powerful software manages multiple tasks using Windows 7 and Win 8 Professional Versions and supports databases such as MSSQL and MS Access.

The software's multi-database capabilities allow the customer the flexibility to choose either MS Access database or MS SQL database. Multiple users (software operators) with different levels of access can simultaneously access the system. The system starts with only a single user called "Administrator", and the administrator can create different users with different access levels enabling them with access only to data as allowed by their access rights or privileges. The same software supports stand-alone, small two-four doors installations, medium-size installation, and enterprise global systems. Just add more doors as you grow. Our licensing process is simple. There is a one-time cost based on hardware and functionalities needed. As you expand your operations, simply add features to your license via eMail while adding, not replacing, existing equipment.
